

## Required files for submission with your Group Project Report

[Alexandru Fechete](#)

All sections

Dear Students,

I would like to clarify what files you need to submit with your Group Project Report:

1. **Simulink file of your Automatic Traffic Light system - one that does not have a pedestrian push button** (e.g. switch) and has a Counter Limited Block (Group Project Milestone 1)
2. **Simulink file that has incorporated a Switch as the Pedestrian button into your Automatic Traffic Light system**, here you have also the Sateflow chart (Final Project)

The above two files you will need to submit it separate from your Group Project Report.

Please note: You might need also to take screenshots of the above two files as a testing evidence and include it into your Group Project Report.

You do not need to submit your hardware implementation Simulink file that has the Arduino Uno input/output ports. For this one you will take only a screenshot and you should include it into the Appendix section of your Group Project Report.

Best regards,

Alex
